# **SITUATION SUMMARY**

## **NORTHERN REGION FIRES**

### **Air Quality**

- Recent dry lightning strikes have caused many small fires in the Six Rivers and Shasta-Trinity National Forest as well as State Responsibility Areas.
- Current weather forecasts show the recent low pressure moving out of the area and replaced by a warming trend with drier weather and moderate to light winds over the area.
- The Saddle Fire, located in the Shasta-Trinity National Forest near the town of Hyampom, continues to produce smoke in nearby communities. At this time, smoke is laying in valleys but may lift and transport to further locations throughout the day. Satellite images show smoke traveled north toward Willow Creek and to the southeast past the Hyampom area.
- In Del Norte County, the Buckskin Fire located near Cave Junction, Oregon is producing smoke impacts in downwind areas southwesterly of the fire. Satellite imagery indicates that Smith River could be in the path of the smoke. Crescent City may also be experiencing smoke from the fire.
- Forecasting smoke impacts can be challenging as smoke can vary widely within just a few miles as Humboldt, Del Norte and Trinity Counties contain mountains, valleys, and a thousand different air flow patterns.
- Further Air Quality information will be provided to the public as updated information becomes available.
- For 24-hour Air Quality Information:
  - NCUAQMD's hotline toll-free at 1-866-BURN-DAY (1-866-287-6329)

# WEATHER

## WEATHER SYNOPSIS BY REGION:

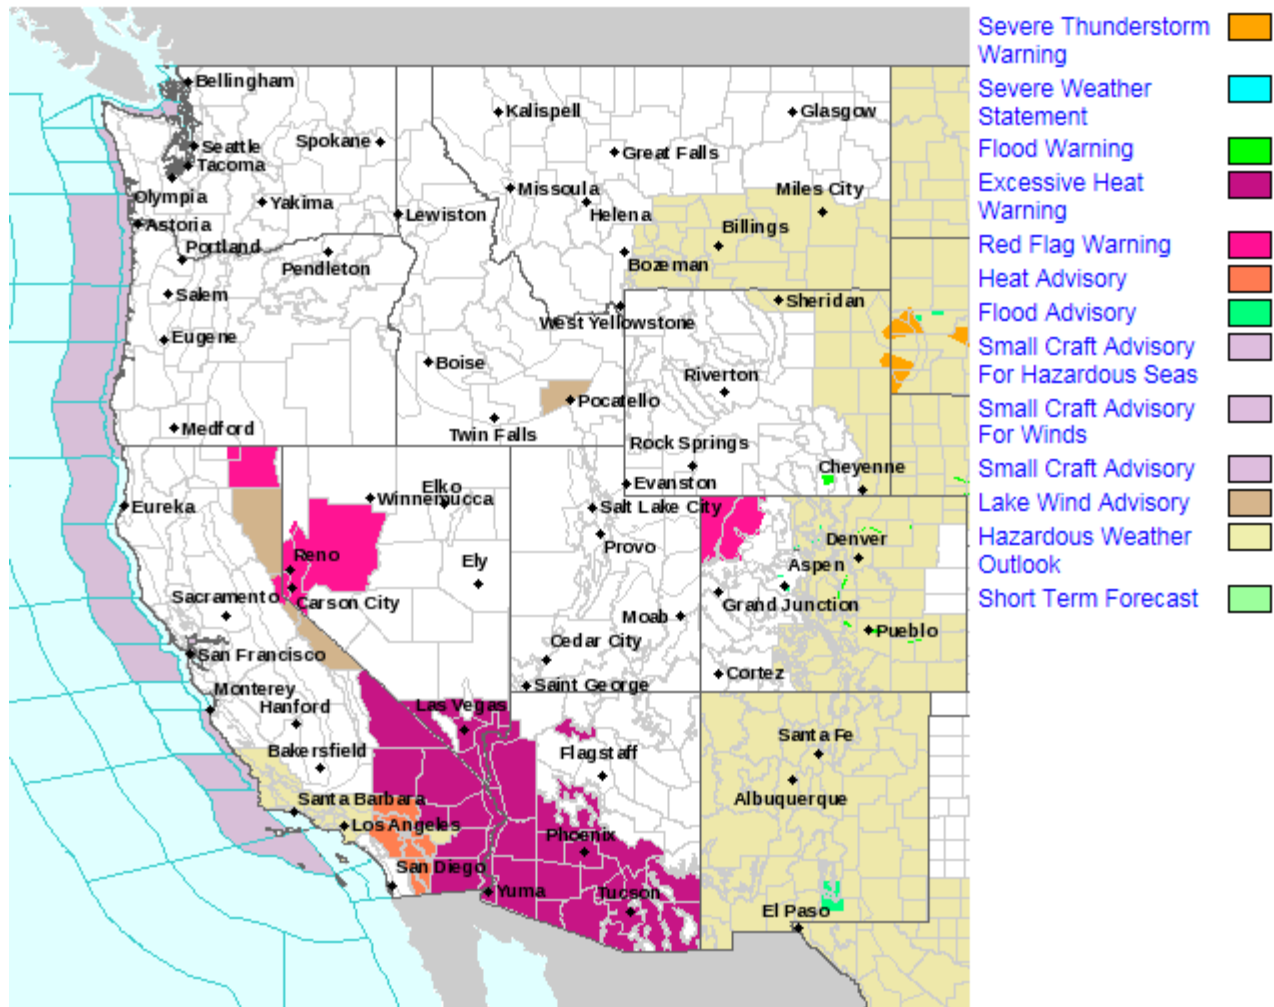

### **NORTHERN CALIFORNIA**

Northern California will remain seasonably warm and dry through the period but an approaching low moves into the Pacific Northwest later today into Sunday, bringing increasing west, southwest winds to much of the area. General wind speeds of 10-20 mph are expected this afternoon and again Sunday, but along and east of the Sierra/Cascades winds should be much stronger, 20-30 mph with gusts approaching 40 mph. Fuels are not quite critically dry yet in those areas. Winds diminish a bit early next week but remain light westerly/onshore. High pressure gradually builds across the area with another round of warm and dry conditions. By late next week, a weak low off the California coast may help bring some tropical moisture northward into our area. This will need to be monitored closely, as it could provide some scattered lightning activity late in the period.

### **SOUTHERN CALIFORNIA**

It will warm a couple more degrees today, with mid-80s to mid-90s in the mountains and mid-90s to 105 degrees in the valleys, as strong high pressure will be centered just to the east over the Colorado River. Temperatures will slowly cool across the region Sunday through Tuesday as the high pressure area continues to move eastward. Another high pressure area will form over the Four Corners Wednesday and then strengthen through the end of next week bringing a gradual warming trend to the area. Minimum humidity will continue to be in the single digits and teens, above and inland, from the marine layer through the end of next week. The marine layer will deepen through Tuesday, when it will become around 2,000 feet deep and then it will shrink again toward the end of next week. Westerly winds of 15 to 25 mph with gusts to 40 mph will continue to surface across the Tehachapi Mountains, Antelope Valley, and Banning Pass through Tuesday evening. It looks as though there will be enough monsoonal moisture for shower and thunderstorm activity to develop over the mountains and deserts by next weekend.
